

AI-Powered Textile Waste Intelligence Platform

Sustainability Report

Generated on: 15-08-2026 20:43

Executive Summary

Metric	Value
Total Predictions	28
Average Sustainability Score	91.43
Total Carbon Saved	141.20 kg CO $\blacksquare$
Waste Diversion	82.14%
Reusable Waste	23
Recyclable Waste	0
Damaged Waste	0

Prediction Details

ID	Fabric	Confidence	Category	Carbon Saved	Score
28	Abaca	100.0	Biodegradable	3.2 kg CO $\blacksquare$	75
27	Silk	58.1	Reusable	6.2 kg CO $\blacksquare$	95
26	Silk	58.1	Reusable	6.2 kg CO $\blacksquare$	95
25	Silk	58.1	Reusable	6.2 kg CO $\blacksquare$	95
24	Abaca	100.0	Biodegradable	3.2 kg CO $\blacksquare$	75
23	Silk	58.1	Reusable	6.2 kg CO $\blacksquare$	95
22	Silk	58.1	Reusable	6.2 kg CO $\blacksquare$	95
21	Cotton	56.0	Reusable	5.5 kg CO $\blacksquare$	95
20	Cotton	56.0	Reusable	5.5 kg CO $\blacksquare$	95
19	Linen	71.3	Reusable	4.2 kg CO $\blacksquare$	95
18	Linen	71.3	Reusable	4.2 kg CO $\blacksquare$	95
17	Linen	71.3	Reusable	4.2 kg CO $\blacksquare$	95
16	Linen	71.3	Reusable	4.2 kg CO $\blacksquare$	95
15	Linen	71.3	Reusable	4.2 kg CO $\blacksquare$	95
14	Linen	71.3	Reusable	4.2 kg CO $\blacksquare$	95
13	Linen	71.3	Reusable	4.2 kg CO $\blacksquare$	95
12	Linen	71.3	Reusable	4.2 kg CO $\blacksquare$	95
11	Abaca	56.41	Biodegradable	3.2 kg CO $\blacksquare$	75

ID	Fabric	Confidence	Category	Carbon Saved	Score
10	Abaca	56.41	Biodegradable	3.2 kg CO■	75
9	Abaca	56.41	Biodegradable	3.2 kg CO■	75
8	Silk	45.27	Reusable	6.2 kg CO■	95
7	Silk	45.27	Reusable	6.2 kg CO■	95

2	Silk	45.27	Reusable	6.2 kg CO■	95
1	Silk	45.27	Reusable	6.2 kg CO■	95

Environmental Impact

The system recorded 28 textile waste predictions with an estimated total carbon saving of 141.20 kg CO■. The calculated waste diversion rate is 82.14%.

This report provides a consolidated view of AI-based textile classification, waste categorization, carbon savings, and sustainability performance.
